**HIGH PRECISION
HIGH SPEED
PLANETARY GEARBOX**

AF / AFR Series

Stainless

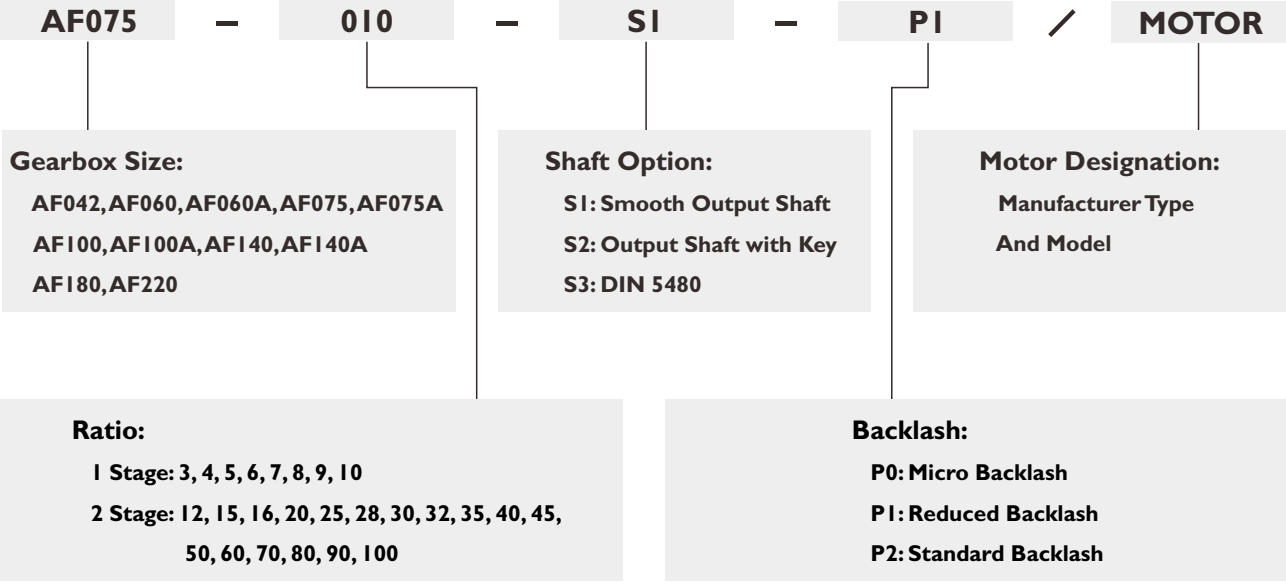

Apex Dynamics, Inc. is the world's most productive manufacturer of servomotor drive planetary gearboxes for precision automation machinery. From our 800,000+ square foot ISO 9001:2008 manufacturing facility, based in Taichung, Taiwan, we manufacture to stock using the newest precision machine tools and quality test and inspection equipment. Complete focus on quality and precision allows us to produce our high quality gearheads at precision levels down to less than 1 arc minute (1/60 th of a degree), with consistency and high reliability.

Based on more than twenty years of accumulated manufacturing and marketing experience, plus the highest level of technical production capabilities, Apex Dynamics, Inc. designs and builds technically advanced, high speed, low backlash servo application planetary gearboxes. Our Break through patented technology (over 6 patents), provides the customer with the optimum high precision helical reducer at a reasonable price. We are continuously improving processes, finding proper and effective methods to provide customers new solutions for difficult applications, and developing new products.

The primary focus in daily operation is quality. We pride ourselves on our dedication to quality; our duty - is customer satisfaction.

(1) Ratio ($i=N_{in}/N_{out}$)

(2) Max. acceleration torque $T_{2B} = 60\%$ of T_{2NOT}

(3) Applied to the output shaft center at 100 rpm

(4) The values are measured by gearbox with ratio 10 (1-stage) or ratio 100 (2-stage), no loading at 3,000 RPM or at the respective Nominal Input Speed by bigger model size. By lower ratio and/or higher RPM, the values could be higher.

Max. Tilting Moment M_{2K}

(1) Ratio ($i=N_{in}/N_{out}$)

(2) Max. acceleration torque $T_{2B} = 60\%$ of T_{2NOT}

(3) Applied to the output shaft center at 100 rpm

(4) The values are measured by gearbox with ratio 10 (1-stage) or ratio 100 (2-stage), no loading at 3,000 RPM

or at the respective Nominal Input Speed by bigger model size.

By lower ratio and/or higher RPM, the values could be higher.

Permitted Radial and Axial Loads

The permitted radial and axial loads on output shaft of the gearbox depend on the design of the gearbox supporting bearings.

APEX use the extension straddle oversized ball bearing design. It can take heavy load from both axes.

F_{2r} Radial Load
 F_{2a} Axial Load

If radial force F_{2r} is exerted on the center of the output shaft $X=1/2 \times L$. The permitted radial load is given on left diagram.

If radial force F_{2r} is not exerted on the center of the output shaft $X < 1/2 \times L$ or $X > 1/2 \times L$. The permitted radial and axial loads can be calculated by the position load factor k_b on the left diagram.
